

Moldex3D eDesignSYNC for NX

Moldex3D – TIPS_10045

2010/12/17

CoreTech System Co., Ltd.
www.moldex3d.com

- **Moldex3D eDesignSYNC for NX is an easy-to use interface fully embedded in NX, providing a seamless workflow from design to simulation. With the complete support of Moldex3D/eDesign, NX users can design CAD models, prepare the pre-processing work and directly run professional injection molding analyses for verification and optimization in their familiar NX environment by eDesignSYNC.**

- > **The seamless workflow improves the modeling and simulation interoperability and encourages design changes for product optimization**
- > **The automatic True 3D meshing engine helps users generate high-quality mesh easily and efficiently**
- > **The easy-to-navigate user interface and intelligent process wizards support full pre-processing preparation for precise molding simulation**
- > **The full integration with Moldex3D/eDesign provides a complete series of CAE solutions: Flow, Pack, Cool, Warp, Fiber, MCM and more advanced modules**
- > **The complete support of parallel processing for multi-core and multi-CPU highly enhances the calculation speed by utilizing the great power of computing**

- > **Platform**
 - Windows: Windows 7, Windows Vista
- > **Software**
 - Moldex3D: Moldex3D/eDesign R10.0
 - NX: NX 5.0, 6.0, 7.0 or 7.5

Thank you!
